

# L<sup>A</sup>T<sub>E</sub>X Math for Undergrads

**Rule One** Any mathematics at all, even a single character, gets a mathematical setting. Thus, for “the value of  $x$  is 7” enter the value of  $\$x\$$  is  $\$7\$$ .

**Template** Your document should contain at least this.

```
\documentclass{article}
\usepackage{mathtools,amssymb,amsthm} % imports amsmath

\begin{document}
--document body here--
\end{document}
```

## Common constructs

$$\begin{array}{ll} x^2 & \sqrt{2}, \sqrt[3]{3} \\ x_{i,j} & \frac{x_i}{x_j}, \frac{2}{3} \end{array}$$

**Calligraphic letters** Use as in  $\$\\mathcal{A}\$$ .

$$A B C D E F G H I J K L M N O P Q R S T U V W X Y Z$$

Get script letters, such as  $\mathcal{P}$  from  $\$\\mathscr{P}\$$ , by putting  $\usepackage{mathrsfs}$  in the preamble.

## Greek

$\alpha$	$\backslash\alpha$	$\xi, \Xi$	$\backslash\xi, \backslash\Xi$
$\beta$	$\backslash\beta$	$\circ, \circ$	$\circ, \circ$
$\gamma, \Gamma$	$\backslash\gamma, \backslash\Gamma$	$\pi, \Pi$	$\backslash\pi, \backslash\Pi$
$\delta, \Delta$	$\backslash\delta, \backslash\Delta$	$\varpi$	$\backslash\varpi$
$\epsilon$	$\backslash\epsilon$	$\rho$	$\backslash\rho$
$\varepsilon$	$\backslash\varepsilon$	$\varrho$	$\backslash\varrho$
$\zeta$	$\backslash\zeta$	$\sigma, \Sigma$	$\backslash\sigma, \backslash\Sigma$
$\eta$	$\backslash\eta$	$\varsigma$	$\backslash\varsigma$
$\theta, \Theta$	$\backslash\theta, \backslash\Theta$	$\tau$	$\backslash\tau$
$\vartheta$	$\backslash\vartheta$	$\upsilon, \Upsilon$	$\backslash\upsilon, \backslash\Upsilon$
$\iota$	$\backslash\iota$	$\phi, \Phi$	$\backslash\phi, \backslash\Phi$
$\kappa$	$\backslash\kappa$	$\varphi$	$\backslash\varphi$
$\lambda, \Lambda$	$\backslash\lambda, \backslash\Lambda$	$\chi$	$\backslash\chi$
$\mu$	$\backslash\mu$	$\psi, \Psi$	$\backslash\psi, \backslash\Psi$
$\nu$	$\backslash\nu$	$\omega, \Omega$	$\backslash\omega, \backslash\Omega$

## Sets and logic

$\cup$	$\backslash\cup$	$\mathbb{R}$	$\backslash\mathbb{R}$	$\forall$	$\backslash\forall$
$\cap$	$\backslash\cap$	$\mathbb{Z}$	$\backslash\mathbb{Z}$	$\exists$	$\backslash\exists$
$\subset$	$\backslash\subset$	$\mathbb{Q}$	$\backslash\mathbb{Q}$	$\neg$	$\backslash\neg$
$\subseteq$	$\backslash\subseteq$	$\mathbb{N}$	$\backslash\mathbb{N}$	$\vee$	$\backslash\vee$
$\supset$	$\backslash\supset$	$\mathbb{C}$	$\backslash\mathbb{C}$	$\wedge$	$\backslash\wedge$
$\supseteq$	$\backslash\supseteq$	$\emptyset$	$\backslash\emptyset$	$\vdash$	$\backslash\vdash$
$\in$	$\backslash\in$	$\emptyset$	$\backslash\emptyset$	$\models$	$\backslash\models$
$\notin$	$\backslash\notin$	$\aleph$	$\backslash\aleph$	$\setminus$	$\backslash\setminus$

Negate an operator, as in  $\not\subset$ , with  $\not\subset$ . Get the set complement  $A^c$  with  $A^{\complement}$  (or  $A^c$  with  $A^{\complement}$ , or  $\overline{A}$  with  $\overline{\{A\}}$ ).

## Decorations

$$\begin{array}{ll} f' & \dot{f} \\ f'' & \ddot{f} \\ \Sigma^* & \text{\textSigma}^* \end{array} \quad \begin{array}{ll} \dot{a} & \text{\textdot}{} a \\ \ddot{a} & \text{\textddot}{} a \\ \hat{x} & \text{\texthat}{} x \\ \bar{x} & \text{\textbar}{} x \\ \vec{x} & \text{\textvec}{} x \end{array}$$

If the decorated letter is  $i$  or  $j$  then some decorations need  $\imath$  or  $\jmath$ , as in  $\text{\textvec}{} \imath$ . Some authors use boldface for vectors:  $\text{\textbf}{} x$ .

Entering  $\overline{x+y}$  produces  $\overline{x+y}$ , and  $\widehat{x+y}$  gives  $\widehat{x+y}$ . Comment on an expression as here (there is also  $\overbrace{\dots}$ ).

$$\underbrace{x+y}_{|A|} \quad \underbrace{x+y}_{\{|A|\}}$$

**Dots** Use low dots in a list  $\{0, 1, 2, \dots\}$ , entered as  $\{0, 1, 2, \dots, \backslash\ldots\}$ . (If you use  $\ldots$  in plain text as with London, Paris,  $\ldots$ , then note the thinspace  $\,$ , before the period.) Use centered dots in a sum or product  $1 + \dots + 100$ , entered as  $1 + \cdots + 100$ . You can also get vertical dots  $\vdots$  and diagonal dots  $\ddots$ .

**Roman names** Enter  $\tan(x)$ , with a backslash, instead of  $\tan(x)$ . These get the same treatment.

$\sin$	$\backslash\sin$	$\sinh$	$\backslash\sinh$	$\arcsin$	$\backslash\arcsin$
$\cos$	$\backslash\cos$	$\cosh$	$\backslash\cosh$	$\arccos$	$\backslash\arccos$
$\tan$	$\backslash\tan$	$\tanh$	$\backslash\tanh$	$\arctan$	$\backslash\arctan$
$\sec$	$\backslash\sec$	$\coth$	$\backslash\coth$	$\min$	$\backslash\min$
$\csc$	$\backslash\csc$	$\det$	$\backslash\det$	$\max$	$\backslash\max$
$\cot$	$\backslash\cot$	$\dim$	$\backslash\dim$	$\inf$	$\backslash\inf$
$\exp$	$\backslash\exp$	$\ker$	$\backslash\ker$	$\sup$	$\backslash\sup$
$\log$	$\backslash\log$	$\deg$	$\backslash\deg$	$\liminf$	$\backslash\liminf$
$\ln$	$\backslash\ln$	$\arg$	$\backslash\arg$	$\limsup$	$\backslash\limsup$
$\lg$	$\backslash\lg$	$\gcd$	$\backslash\gcd$	$\lim$	$\backslash\lim$

## Other symbols

$<$	$\backslash<$	$\angle$	$\backslash\angle$	$\cdot$	$\backslash\cdot$
$\leq$	$\backslash\leq$	$\measuredangle$	$\backslash\measuredangle$	$\pm$	$\backslash\pm$
$>$	$\backslash>$	$\ell$	$\backslash\ell$	$\mp$	$\backslash\mp$
$\geq$	$\backslash\geq$	$\parallel$	$\backslash\parallel$	$\times$	$\backslash\times$
$\neq$	$\backslash\neq$	$45^\circ$	$\backslash 45^\circ$	$\div$	$\backslash\div$
$\ll$	$\backslash\ll$	$\cong$	$\backslash\cong$	$*$	$\backslash\ast$
$\gg$	$\backslash\gg$	$\ncong$	$\backslash\ncong$	$ $	$\backslash\mid$
$\approx$	$\backslash\approx$	$\sim$	$\backslash\sim$	$\nmid$	$\backslash\nmid$
$\asymp$	$\backslash\asymp$	$\simeq$	$\backslash\simeq$	$n!$	$\backslash n!$
$\equiv$	$\backslash\equiv$	$\nsim$	$\backslash\nsim$	$\partial$	$\backslash\partial$
$\prec$	$\backslash\prec$	$\oplus$	$\backslash\oplus$	$\nabla$	$\backslash\nabla$
$\preceq$	$\backslash\preceq$	$\ominus$	$\backslash\ominus$	$\hbar$	$\backslash\hbar$
$\succ$	$\backslash\succ$	$\odot$	$\backslash\odot$	$\circ$	$\backslash\circ$
$\succeq$	$\backslash\succeq$	$\otimes$	$\backslash\otimes$	$\star$	$\backslash\star$
$\propto$	$\backslash\propto$	$\oslash$	$\backslash\oslash$	$\surd$	$\backslash\surd$
$\doteq$	$\backslash\doteq$	$\upharpoonright$	$\backslash\upharpoonright$	$\checkmark$	$\backslash\checkmark$

Use  $a \mid b$  for the divides relation,  $a \mid b$ , and  $a \nmid b$  for the negation,  $a \nmid b$ . Also use  $\mid$  to get set builder notation  $\{a \in S \mid a \text{ is odd}\}$ , with  $\{a \in S \mid \text{\texttt{a}} \text{ is odd}\}$ .

## Arrows

$\rightarrow$	$\backslash\rightarrow$	$\mapsto$	$\backslash\mapsto$
$\nrightarrow$	$\backslash\nrightarrow$	$\longmapsto$	$\backslash\longmapsto$
$\longrightarrow$	$\backslash\longrightarrow$	$\leftarrow$	$\backslash\leftarrow$
$\Rightarrow$	$\backslash\Rightarrow$	$\leftrightarrow$	$\backslash\leftrightarrow$
$\nRightarrow$	$\backslash\nRightarrow$	$\downarrow$	$\backslash\downarrow$
$\Longrightarrow$	$\backslash\Longrightarrow$	$\uparrow$	$\backslash\uparrow$
$\rightsquigarrow$	$\backslash\rightsquigarrow$	$\updownarrow$	$\backslash\updownarrow$

The right arrows in the first column have matching left arrows, such as  $\leftarrow$ , and there are some other matches for down arrows, etc.

**Variable-sized operators** The summation  $\sum_{j=0}^3 j^2$  `\sum_{j=0}^3 j^2` and the integral  $\int_{x=0}^3 x^2 dx$  `\int_{x=0}^3 x^2 dx` expand when displayed.

$$\sum_{j=0}^3 j^2 \quad \int_{x=0}^3 x^2 dx$$

These do the same.

$$\begin{array}{lll} \int \text{\textbackslash int} & \iiint \text{\textbackslash iint} & \bigcup \text{\textbackslash bigcup} \\ \iint \text{\textbackslash iint} & \oint \text{\textbackslash oint} & \bigcap \text{\textbackslash bigcap} \end{array}$$

## Fences

$$\begin{array}{llll} () \text{\textbackslash O} & \langle \rangle \text{\textbackslash langle\range} & || \text{\textbackslash I\|} & | \text{\textbackslash I\|} \\ [] \text{\textbackslash D} & [ ] \text{\textbackslash lfloor\rfloor} & \parallel \text{\textbackslash \|} & \backslash \text{\textbackslash \|} \\ \{ \} \text{\textbackslash \{} \text{\textbackslash \}} & [ ] \text{\textbackslash lceil\rciel} & & \end{array}$$

Fix the size with `\big`, `\Big`, `\bigg`, or `\Bigg`.

$$\left[ \sum_{k=0}^n e^{k^2} \right] \text{\textbackslash Big}[\sum_{k=0}^n e^{k^2}\text{\textbackslash Big}]$$

To have them grow with the enclosed formula, use `\left` and `\right` (although sometimes `\big`, etc., are necessary).

$$\left\langle i, 2^{2^i} \right\rangle \text{\textbackslash left\textbackslash langle i, 2^{2^i}\text{\textbackslash right\textbackslash range}}$$

Every `\left` must match a `\right` and they must end on the same line in the output. For a one-sided fence, put a `\left.` or `\right.` on the other side.

$$\frac{df}{dx} \bigg|_{x_0} \text{\textbackslash left.\textbackslash frac\{df\}\{dx\}\text{\textbackslash right}|_{x_0}}$$

**Arrays, Matrices** Make an array of mathematical text as you make a table of plain text.

$$\begin{array}{cc} 0 \leftrightarrow 0 & \begin{array}{c} \text{\textbackslash begin\{array\}\{rcl\}} \\ 0 \&\text{\textbackslash leftarrow} \\ 1 \&\text{\textbackslash leftarrow} \\ 2 \&\text{\textbackslash leftarrow} \\ \vdots \&\text{\textbackslash leftarrow} \end{array} \\ 1 \leftrightarrow 1 & \begin{array}{c} 0 \&\text{\textbackslash leftarrow} \\ 1 \&\text{\textbackslash leftarrow} \\ 2 \&\text{\textbackslash leftarrow} \\ \vdots \&\text{\textbackslash leftarrow} \end{array} \\ 2 \leftrightarrow 4 & \begin{array}{c} 1 \&\text{\textbackslash leftarrow} \\ 2 \&\text{\textbackslash leftarrow} \\ \vdots \&\text{\textbackslash leftarrow} \end{array} \\ \vdots \&\vdots & \begin{array}{c} \&\text{\textbackslash vdots} \\ \&\text{\textbackslash vdots} \end{array} \end{array} \text{\textbackslash end\{array\}}$$

Definition by cases is an array with two columns.

$$f_n = \begin{cases} a & \text{if } n = 0 \\ r \cdot f_{n-1} & \text{else} \end{cases} \quad \begin{array}{c} \text{\textbackslash n=} \\ \text{\textbackslash begin\{cases\}} \\ a \&\text{\textbackslash text\{if \$n=0\$\\} \\ r \cdot \text{\textbackslash cdot} f_{\text{\textbackslash n-1}} \&\text{\textbackslash text\{else\}} \\ \text{\textbackslash end\{cases\}} \end{array}$$

A matrix is an array with fences. With a `pmatrix` environment, you need not specify column alignments.

$$\begin{pmatrix} a & b \\ c & d \end{pmatrix} \quad \begin{array}{c} \text{\textbackslash begin\{pmatrix\}} \\ a \&b \\ c \&d \\ \text{\textbackslash end\{pmatrix\}} \end{array}$$

For the determinant use `|A|` inline and `vmatrix` in display.

**Spacing in mathematics** Improve  $\sqrt{2}x$  to  $\sqrt{2}x$  with a thin space, as in `\sqrt{2}\,x`. Slightly wider are `\:` and `\;` (the three are in ratio 3 : 4 : 5). Get the improvement of  $n/\log n$  instead of  $n/\log n$  by using a negative thin space, as in `n/\!\log n`. Bigger spaces are: `\quad` for  $\rightarrow \leftarrow$ , and `\qquad` for  $\rightarrow \leftarrow$ , which are useful between parts of a display. Get arbitrary space as in `\hspace*{0.5cm}`.

**Displayed equations** The `equation*` environment puts an equation on a separate line.

$$S = k \cdot \lg W \quad \begin{array}{c} \text{\textbackslash begin\{equation\*\}} \\ S=k\cdot\lg W \\ \text{\textbackslash end\{equation\*\}} \end{array}$$

You can break into multiple lines.

$$\sin(x) = x - \frac{x^3}{3!} \quad \begin{array}{c} \text{\textbackslash begin\{multline\*\}} \\ \sin(x)=x-\frac{x^3}{3!} \\ +\frac{x^5}{5!}-\dots \\ \text{\textbackslash end\{multline\*\}} \end{array}$$

Align equations using `align*`

$$\begin{aligned} \nabla \cdot \mathbf{D} &= \rho & \begin{array}{c} \text{\textbackslash begin\{align\*\}} \\ \nabla\cdot\mathbf{D}=\rho \\ \nabla\cdot\mathbf{B}=0 \\ \text{\textbackslash end\{align\*\}} \end{array} \\ \nabla \cdot \mathbf{B} &= 0 \end{aligned}$$

(the left or right side of an alignment can be empty). For each environment, get a numbered version by dropping the asterisk from the name.

**Calculus examples** The last three here are display style.

$$\begin{array}{ll} f: \mathbb{R} \rightarrow \mathbb{R} & f\colon \mathbb{R} \rightarrow \mathbb{R} \\ 9.8 \text{ m/s}^2 & 9.8-\text{\textbackslash text\{m\}}/\text{\textbackslash text\{s\}}^2 \\ \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h} & \text{\textbackslash lim\{h\to 0\}\text{\textbackslash frac\{f(x+h)-f(x)\}\{h\}}} \\ \int x^2 dx = x^3/3 + C & \text{\textbackslash int x^2\,dx=x^3/3+C} \\ \nabla = i \frac{d}{dx} + j \frac{d}{dy} + k \frac{d}{dz} & \text{\textbackslash nabla=\boldsymbol{i}\frac{d}{dx}+\boldsymbol{j}\frac{d}{dy}+\boldsymbol{k}\frac{d}{dz}} \end{array}$$

**Discrete mathematics examples** There are four modulo forms:  $m \bmod n$  is from `m\bmod n`, and  $a \equiv b \pmod{m}$  is from `a\equiv b\pmod m`, and  $a \equiv b \pmod{m}$  is from `a\equiv b\pod m`.

For combinations the binomial symbol  $\binom{n}{k}$  is from `\binom{n}{k}`. This resizes to be bigger in a display (to require the display version use `\dbinom{n}{k}` and require the inline version with `\tbinom{n}{k}`).

For permutations use  $n^r$  from `n^{\underline{r}}` (some authors use  $P(n,r)$ , or  $n P_r$  from `\{n\}_nP_r`).

## Statistics examples

$$\begin{array}{ll} \sigma^2 = \sqrt{\sum(x_i - \mu)^2/N} & \text{\textbackslash sigma}^2=\sqrt{\sum(x_i-\mu)^2/N} \\ E(X) = \mu x = \sum(x_i - P(x_i)) & E(X)=\mu_x=\sum(x_i-P(x_i)) \end{array}$$

The probability density of the normal distribution

$$\frac{1}{\sqrt{2\sigma^2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$$

comes from this.

$$\frac{\text{\textbackslash sqrt\{2\sigma}^2\pi\}}{\text{\textbackslash e}^{-\frac{(x-\mu)^2}{2\sigma}^2}}!$$

**For more** See also the Comprehensive L<sup>A</sup>T<sub>E</sub>X Symbols List at [mirror.ctan.org/info/symbols/comprehensive](http://mirror.ctan.org/info/symbols/comprehensive) and DeTeXify at [detexify.kirelabs.org/classify.html](http://detexify.kirelabs.org/classify.html).
